SCHEME OF CLASSIFICATION

DEPARTMENT OF AGRICULTURE LIBRARY

Edition 5

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON: 1940

PREFACE

The classification of the Library of the Department of Agriculture is one which was made especially for it in 1889 by W. I. Fletcher, then librarian of Amherst College, there not being then available any adequate printed classification of the literature of agriculture. The classification as originally made was broad and simple, the total number of classes being only 230. The library's collections at that time were comparatively small, aggregating probably less than 25,000 volumes. With the growth of the library it has been necessary to expand greatly the original classification, the number of classes being now approximately 2,200. The additions have been made from time to time as the size and use of the collections in certain subjects have demanded subdivision and as books on subjects not previously included in the classification have been added to the library. These changes have been largely influenced also by the growth of the work and organization of the Department. In making the additions it has not been possible always, on account of the make-up of the classification, to place them where they logically belong. As a result the present classification is in many respects illogical and unbalanced. The classification of some subjects is fairly minute, whereas others have not yet been subdivided. In the fourth edition issued in 1933 horticulture and agricultural economics were greatly expanded. For books on agriculture before 1600 and for pre-Linnean botany, special numbers have been provided, but in other classes the early books are separated from the general collection by the addition of the letter R before the class numbers.

In the present edition there have been numerous additions throughout the classification but principally in the classes for Government documents, in order to provide places for the publications of new Federal offices established in the past six years. A number of subdivisions have also been added under class 1 for the processed publications of this Department.

There still remain many classes greatly in need of more minute treatment, for instance, zoology, veterinary medicine, and chemistry. These could not be changed at this time because of the work involved in reclassifying. Many other classes it was not feasible to change, since a number of the bulletins and periodicals in these classes have been indexed and printed cards placed in the catalog.

The classification is not one which can be recommended for adoption by other libraries and is printed exclusively for departmental use. If used by other libraries it could be considerably improved by some changes in the sequence of the classes. The most desirable changes would be to have the reference books and the bibliography at the beginning or the end of the classification and the experiment station publications near the United States Department of Agriculture publications. In the history of the classification it is not known why

these large groups were placed as they are, but it is surmised that it may have been due to their particular location on the library shelves at the time the classification was originally made. There is also no apparent justification for having the number for entomological periodicals follow the number for entomological societies, whereas in the case of botany it is the reverse, the periodicals preceding the societies. In the interest of a more logical arrangement another needed change would be to have the more general number for crops, now 64, interchanged with the number for cereals, now 59, in the classification.

It would undoubtedly have been desirable if the library could have adopted the new classification of the Library of Congress when it was issued, but this was not possible as so large a proportion of the library had by that time been classified and cataloged.

The classification was first printed in 1898. The second edition was issued in 1906, the third in 1916, and the fourth in 1933. The classification has been printed on one side of the page to permit of additions and changes in the future.

CLARIBEL R. BARNETT,
Librarian.
